

CARBON GENERAL PURPOSE & MAINTENANCE BLADES

Stiffer blades offer straighter cuts in wood & metal cutting. On metals they are used for short production and maintenance applications.

These blades are very similar to Flex Back blades, however they are stiffer due to their hardened and tempered backer. This makes them ideal for applications where straighter cuts or heavier feed pressure are required. Not recommended for blade speeds exceeding 4,000 sfm.

Applications:

- Low alloy, easy-to-machine ferrous metals
- Non-ferrous metals like brass, bronze, aluminum and lead
- Wood
- Plastic
- Cork
- Composition Board
- Plywood

▼ Standard Set ▼ Heavy Set ▼ Double Set Raker

Features:

- Stiffer than HEF blades for straighter cuts
- Wood and similar: low cost-per-blade/low cost-per-cut
- Metals: low cost-per-blade/higher cost-per-cut than bi-metals

Benefits:

- Will accept heavier feed pressure than HEF
- Good on easy-to-machine metals and other easy-to-cut materials

GENERAL PURPOSE & MAINTENANCE
Hard Edge/Hard Back (HB) Carbon
